

STELLANOR DATACENTERS. NOW ONLINE – AND ALREADY GROWING.

Our mission is to deliver high-quality, reliable and sustainable colocation services through well invested and secure digital infrastructure, to enterprise and wholesale customers, supporting digital outsourcing and the growth of AI.

STELLANOR ACQUIRES TWO DATA CENTERS FROM COLT TECHNOLOGY SERVICES

On 1 September 2025, Stellanor Datacenters completed the acquisition of two high-quality and well-connected London sites from Colt Technology Services, currently serving more than 100 clients. This represents the first step in Stellanor's strategy to be the leading national enterprise, wholesale and AI colocation platform in the UK and Nordics, with plans to create a regional network of datacenters delivering a sustainable and reliable service.

We plan to grow through a combination of further M&A and greenfield projects, whilst ensuring that all growth is considered in the context of maintaining a market leading service quality. The integration of new sites and consistency of service remains our priority and this approach will create a fully connected and coherent network of enterprise colocation hubs and AI inference-ready datacenters.

Stellanor Datacenters will also be able to leverage the deep sector experience of our investor, DWS, who have invested in two substantial European datacenter platforms (NorthC Datacenters and Mediterra) over the past seven years.

Steve Scott, CEO of Stellanor Datacenters, said:

This acquisition marks the beginning of an exciting new chapter. Our priority is to keep customers at the heart of everything we do as we expand the business. Continued investment in our product portfolio and the datacenter infrastructure that underpins our business will be fundamental to delivering on our vision.
